Current resident/owner

The City of Lawrence is undergoing an important initiative in our city. In 2022, the United States Congress approved changes to the Lead and Copper Rule portion of the Safe Drinking Water Act. This now mandates that public water systems, including ours, must replace lead service lines where access is able to be obtained within the public water system.

The city has no known lead service lines on the city side of the system, however area you live in has a higher likelihood that the private side service line serving your residence is classified as Galvanized Requiring Replacement. This classification means that the service line for your property from the meter to your home, if verified by city staff as galvanized, is eligible to be replaced at no cost to you. This is for line replacement up to the closest point practical to the outside of the foundation.

To participate, we kindly ask you to take the time to read the summary and compete the waiver form attached to this letter and send it or any questions you may have to: leadandcopper@lawrenceks.gov or 785-832-314. If you are not the property owner, please notify the owner of this effort.

A city representative will review your information and begin the process of scheduling your service line for replacement. The funds for this program are limited by budget year and will be used based on when responses are received by the city. **We will be replacing service lines in your area soon, if you do not complete the survey and waiver within 30 days, you may no longer qualify for the program or be moved to the end of the line.**

If you have problems filling out the consent form or have additional questions, contact us at leadandcopper@lawrenceks.gov.

Additional information regarding the Lead Service Line Inventory and service line replacement can be found on the back of this letter and at https://lawrenceks.org/mso/lead.
